AAK Agency Management System — User Handbook

This handbook is a plain-language guide to using the system day to day. It is written for the people who will actually use it: the Owner, office staff, and sales representatives. It does not assume any technical background.

1. What this system does

AAK Agency Management System is the day-to-day tool for running a CBL product distribution agency: one warehouse, several delivery vehicles, sales representatives, and shops (customers) who buy on cash or credit. It replaces manual notebooks and spreadsheets for:

- Keeping a list of shops and how much credit each one has
- Recording products, purchases from CBL, and warehouse stock
- Billing shops (sales invoices) and recording payments/cheques
- Planning delivery routes and vehicle loading

- Reporting on sales, collections, and outstanding credit

2. Logging in

1. Open the system's web address in a browser (ask your administrator for the link).
2. Enter your **username** and **password** and click **Login**.
3. If you type the wrong password 5 times in a row, your account is locked for 15 minutes as a security measure. Wait and try again, or ask the Owner to reset it.
4. After logging in, use **Change Password** (top-right menu) to set your own password the first time you log in.

You cannot create your own account — only the Owner can add new staff logins (see Section 4, Manage Users).

3. Who can do what (Roles)

Role	Typical person	What they can access
Owner (ADMIN)	Business owner / distributor	Everything - every module, deleting records, and creating/managing staff logins
Office	Office staff	Customers, sales invoices, products, purchase invoices, inventory, payments, cheques, collections, employees, vehicles, routes, delivery trips - everything except managing user logins and deleting records
Sales Rep	Sales representative	Only their assigned shops and the bills for those shops
Driver	Driver / collector	No direct system access yet - office staff enter delivery and collection records on the driver's behalf

If a page shows “Access Denied” or doesn't appear in your menu, it's because your role doesn't include it - this is intentional, not an error.

4. Manage Users (Owner only)

Menu: Manage Users

- **Add a new staff member:** click + **Add User**, fill in their name, a username, a starting password, and pick their role (Office / Sales Rep). Give them the username and password to log in with, and ask them to change the password after their first login.
- **Deactivate a user** who has left: edit their account and set status to Inactive, rather than deleting - this keeps their history (past invoices, adjustments) intact.

5. Customers (Shops)

Menu: Customers

Each shop you sell to is a “Customer” record.

- **Add a shop:** click + **Add Customer**, enter the shop name, area, contact details, credit limit and payment terms (days), and save.

- **Credit tracking:** the customer list shows each shop's current outstanding balance against its credit limit, so you can see at a glance who is near their limit.
- **QR code:** every shop automatically gets a printable QR code (see **Credit History** page → **Print QR Code**). Stick this at the shop; scanning it with a phone camera opens that shop's credit history page directly, which is useful for quick on-the-spot checks during a delivery or collection visit.
- **Credit History:** click a shop's **Credit History** to see every invoice, payment and the running balance for that shop.

6. Products

Menu: Products

- Each product has a CBL/SKU code, name, brand, category, weight/unit, and both an MRP and the agency's standard selling price.
- Set a **Reorder Level** per product - this is the quantity at which the Inventory page will flag the product as low stock.
- Mark a product **Inactive** instead of deleting it if CBL stops supplying it - this keeps historical invoices and stock history intact.

7. Purchase Invoices (Goods received from CBL)

Menu: Purchase Invoices

- Record what was received from CBL: invoice number, date, and each product/quantity/cost.
- You can upload a photo or PDF of the original CBL invoice for reference and verification.
- Completing a purchase invoice automatically adds the received quantities to warehouse stock - you do not need to also do a separate stock adjustment for it.

8. Inventory

Menu: Inventory

This page shows the current stock level of every product, plus:

- **Low stock** and **out of stock** indicators, based on each product's Reorder Level.
- **Stock Movement History**, a running log of every change to stock and why it happened (purchase, sale, adjustment, opening stock, etc.) - useful for investigating discrepancies.

8.1 Recording a stock adjustment

Click + **Record Stock Adjustment** when stock needs correcting outside of a normal purchase or sale - for example damaged, expired, or missing stock found during a count. Pick the reason, enter the quantity, and the system automatically works out whether that adds to or removes from stock.

8.2 Setting Opening Stock (new product or first-time count)

When a brand-new product is added to the system, or when doing an initial physical stock count for the first time, use + **Set Opening Stock** instead of a normal adjustment. This shortcut pre-selects "Opening Stock (Initial Balance)" as the reason and always adds to stock - it's the correct starting point rather than using Purchase Invoices or a generic adjustment for a first-time balance.

9. Sales Invoices (Bills to shops)

Menu: Sales Invoices

- Create a bill for a shop: pick the customer, sale type (Cash or Credit), and add each product/quantity/price line.

- Click **Complete Invoice & Deduct Stock** once you are sure the bill is final - this is the point where warehouse stock is actually reduced. Before completing, you can still edit the invoice; after completing, it becomes a permanent record for accounting purposes.
- Cash invoices are automatically marked Paid on completion. Credit invoices stay Outstanding until a payment is recorded against them (see Section 10).
- Every invoice has a printable view for handing a physical copy to the shop.

10. Payments & Cheques

Menu: **Payments / Cheques**

- Record any money received from a shop (cash, cheque, or bank transfer) against their outstanding invoices.
- Cheques have their own status tracking (received → banked → cleared/bounced) via the **Cheque Dashboard**, so you always know which cheques are still pending clearance.

11. Collections

Menu: **Collections**

The Collection Dashboard gives a daily/weekly/monthly view of money collected, useful for end-of-day reconciliation and for seeing collection trends over time.

12. Employees & Vehicles

Menu: **Employees / Vehicles**

- **Employees:** keep a record of every driver, helper, sales rep and office staff member - contact details, join date, and status (active/inactive).
- **Vehicles:** register each delivery vehicle (number, type, capacity notes) and optionally assign a regular driver to it.

13. Routes & Delivery Trips

Menu: **Routes / Delivery Trips**

13.1 Routes (optional)

A **Route** is just a named area you deliver to regularly (e.g. “Colombo North”), used to group trips for reporting. Routes are **optional** - if a vehicle’s coverage changes from day to day and doesn’t match any saved route, you don’t have to force-fit it into one.

13.2 Planning a Delivery Trip

Click + **Plan New Trip** and fill in:

- **Trip Date** and **Vehicle** (required)
- **Route** - pick a saved route, *or* leave it blank and instead type a short description into **Area Covered Today** (e.g. “Kandy town + Peradeniya - no fixed route”)
- **Driver / Helper** (optional, from your Employees list)

13.3 Assigning bills and confirming loading

On a trip’s detail page:

1. **Assign a Bill** - pick from the list of completed-but-undelivered bills to load onto this trip.
2. The **Loading Summary** automatically totals up how much of each product is needed across all bills assigned to the trip.

3. Before the vehicle leaves, click **Confirm Loading**. This lets you adjust each product's quantity if what's physically loaded doesn't exactly match the plan (e.g. a shortage), and moves the trip to **Loaded** status.
4. As deliveries happen through the day, update each bill's **Delivery Status** to Completed, Partial, or Unsuccessful directly from the trip page.
5. At the end of the day, once the vehicle is back, edit the trip and set its status to **Closed**.

13.4 Vehicle Stock

Menu: Vehicle Stock (under Delivery Trips)

This page shows, in real time, what is currently loaded onto each vehicle that is out on a trip (status = Loaded) - a live answer to "what's on that truck right now?". A trip drops off this list automatically once it is closed at the end of the day.

14. Reports

Menu: Reports

The Report Dashboard brings together purchase, sales, payment and outstanding-credit reports in one place for management review.

15. Everyday tips

- **Dark mode:** use the toggle in the top navigation if you prefer a darker screen.
- **On mobile:** the app shows a bottom navigation bar with quick access to the most-used pages, and a "More" button for everything else.
- **If something goes wrong:** the system shows a friendly message instead of a raw error page (e.g. "This bill is already assigned to a delivery trip") - read the message, it usually tells you exactly what to fix.
- **Never share your password.** Each staff member should have their own login so that every action in the system can be traced back to the person who did it.

16. Getting help

If you're stuck or think something isn't working as it should, note down:

1. What page you were on and what you clicked.
2. The exact message the system showed you, if any.
3. What you expected to happen instead.

Pass this to your system administrator/developer - it makes fixing the issue much faster than "it doesn't work".
